

SUJOY GHOSH

GENERATIVE AI ENGINEER | AI ENGINEER | AGENTIC AI ENGINEER

Bengaluru, Karnataka, India | +91 89674 22445 | sujoyghosh7584@gmail.com

[LinkedIn](#) | [GitHub](#) | [Suvyon - Live Application](#)

PROFESSIONAL SUMMARY

AI-focused Software Engineer with 3+ years of experience across Generative AI R&D, Python automation, backend services, REST APIs, and enterprise application development. Currently contributing to GenAI research and solution development for CGI Shared Services. Built and deployed Suvyon, a full-stack multi-LLM workspace featuring retrieval-augmented generation (RAG), vector search, tool-using agents, and secure multi-provider routing. Hands-on with Python, FastAPI, PostgreSQL, pgvector, React, TypeScript, and production API development, backed by experience integrating business-critical ERP and warehouse systems.

TECHNICAL SKILLS

Generative AI: Large Language Models (LLMs), RAG, embeddings, semantic search, prompt engineering, tool/function calling, agentic workflows, contextual grounding, multi-provider routing, human-in-the-loop controls

Languages: Python, Java, SQL, TypeScript, C#, AL, C/AL

Backend and Data: FastAPI, REST APIs, Pydantic, SQLAlchemy 2.0, PostgreSQL, Microsoft SQL Server, pgvector, Alembic, JWT

Frontend and Cloud: React, Vite, Tailwind CSS, Microsoft Azure, Azure Blob Storage, Vercel, Render, Supabase

Enterprise and Engineering: Dynamics 365 Business Central, Dynamics NAV, SAP and D365 F&O integrations, Android development, Git, GitHub, Azure DevOps, automated testing, Agile/Scrum

PROFESSIONAL EXPERIENCE

CGI Inc. | Software Engineer

GenAI R&D, Shared Services | Bengaluru, India | Jan 2026 - Present

- Contribute to Generative AI engineering and R&D for a Shared Services account, analyzing business requirements and developing AI application and automation solutions for enterprise use cases.
- Apply Python, REST APIs, prompt engineering, RAG, and semantic search concepts while exploring secure, maintainable patterns for enterprise AI applications.
- Create Python and GitHub Copilot-assisted automations for client-facing and internal workflows, reducing repetitive engineering effort and improving developer productivity.
- Collaborate with business stakeholders and technical teams to identify automation opportunities, translate requirements into solution designs, and evaluate practical AI adoption.
- Continue supporting Microsoft Dynamics 365 Business Central and Java-based Android warehouse solutions, bringing enterprise integration and production-support experience into GenAI solution design.

CGI Inc. | Associate Software Engineer

Bengaluru, India | Jun 2023 - Dec 2025

- Developed enterprise solutions using Dynamics 365 Business Central and Dynamics NAV across finance, procurement, inventory, warehouse, manufacturing, and sales processes.
- Built REST, SOAP, OData, and API-based integrations connecting Business Central with SAP, Dynamics 365 finance & Operations, Android PDA applications, and third-party systems.
- Developed Java-based Android PDA workflows for barcode scanning, goods receipt, pallet tracking, inventory operations, and real-time ERP synchronization.
- Modernized legacy Dynamics NAV C/AL customizations into maintainable AL extensions and delivered reports, scheduled jobs, data-processing utilities, and Azure Blob Storage integrations.
- Created Python utilities for data processing, report generation, file transformation, validation, and recurring engineering workflows while beginning development of AI-assisted solutions.
- Worked with business analysts, architects, QA engineers, and delivery teams throughout requirements analysis, design, implementation, testing, debugging, deployment, and production support.

SELECTED GENAI PROJECT

Suvyon - Multi-LLM AI Workspace | Independent Project

Python, FastAPI, React, TypeScript, PostgreSQL, pgvector | Jul 2026 - Present

[GitHub Repository](#) | [Live Application](#) | [OpenAPI](#)

- Built and deployed an end-to-end GenAI workspace for multi-provider chat, document-grounded answers, web research, and configurable tool-using agents.
- Designed a provider-neutral LLM layer supporting encrypted per-user API keys across nine providers, provider/model validation, normalized tool calls, streaming, and sequential failover.
- Implemented PDF/DOCX ingestion, overlapping chunking, embeddings, and pgvector cosine-distance retrieval with relevance thresholds and cross-document result diversification.
- Engineered a bounded agent loop with typed tool schemas, iterative tool observations, final-answer synthesis, stop controls, and explicit human approval before email side effects.
- Delivered JWT/OTP/OAuth authentication, workspace-scoped authorization, persistent conversations and knowledge bases, responsive UI, database migrations, and deployment across Vercel, Render, and Supabase.
- Authored 82 backend tests covering model routing, RAG, tools, agents, authentication, and safety-critical email behavior.

EDUCATION

Bachelor of Technology in Electronics and Communication Engineering

Bengal College of Engineering & Technology, MAKAUT | Durgapur, West Bengal | 2019 - 2023 | CGPA: 8.9/10

CERTIFICATIONS AND ACHIEVEMENTS

- Microsoft Certified: Azure Fundamentals (AZ-900), 2025
- Microsoft 365 Certified: Copilot and Agent Administration Fundamentals (AB-900), 2026
- Microsoft Certified: Azure AI Fundamentals (AI-901), 2026
- Promoted from Associate Software Engineer to Software Engineer at CGI Inc.
- Received the CGI Bronze Award for contributions to enterprise software modernization and project delivery.
- Recognized twice as CGI Power Performer of the Month for contributions to AI application development, backend engineering, and AI integration initiatives.
